EXP.NO:10

G-PRODUCT OF ARRAY ELEMENTS-MINIMUM

PROBLEM STATEMENT:

Given two arrays array_One[] and array_Two[] of same size N. We need to first rearrange the arrays such that the sum of the product of pairs(1 element from each) is minimum. That is SUM (A[i] * B[i]) for all i is minimum.

For example:

Input	Result
3 1 2 3 4 5 6	28

CODE

```c
#include <stdio.h>

int main() {
    int n, i, j, temp;
    int a[100], b[100];
    int sum = 0;

    scanf("%d", &n);

    for (i = 0; i < n; i++)
        scanf("%d", &a[i]);

    for (i = 0; i < n; i++)
        scanf("%d", &b[i]);

    for (i = 0; i < n; i++) {
        for (j = i + 1; j < n; j++) {
            if (a[i] > a[j]) {
                temp = a[i];
                a[i] = a[j];
                a[j] = temp;
            }
        }
    }
    for (i = 0; i < n; i++) {
        for (j = i + 1; j < n; j++) {
            if (b[i] < b[j]) {
                temp = b[i];
                b[i] = b[j];
                b[j] = temp;
            }
        }
    }

    for (i = 0; i < n; i++)
        sum += a[i] * b[i];

    printf("%d", sum);

    return 0;
}
```
